

Downloading and Connecting to Cisco AnyConnect:

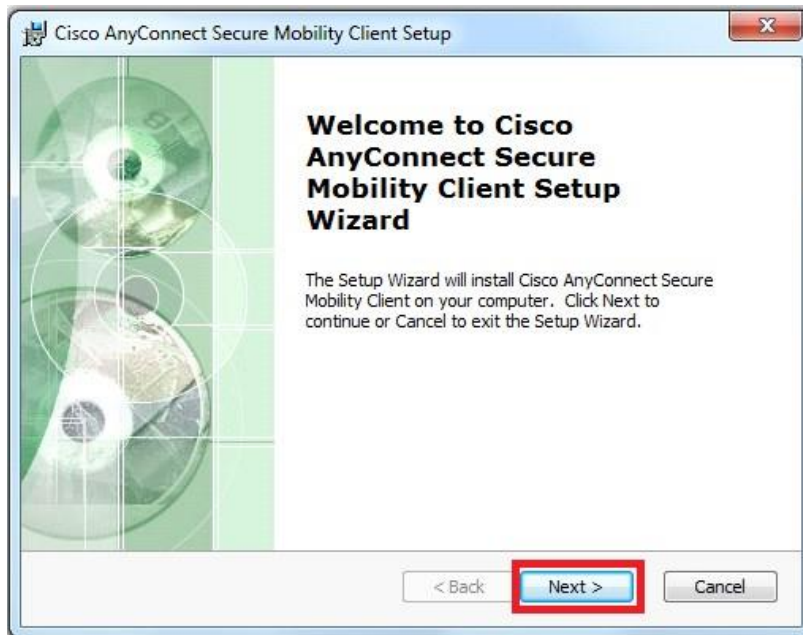

Use the following link to download AnyConnect:

<http://downloads.storis.com/StorisVPN/anyconnect.msi>

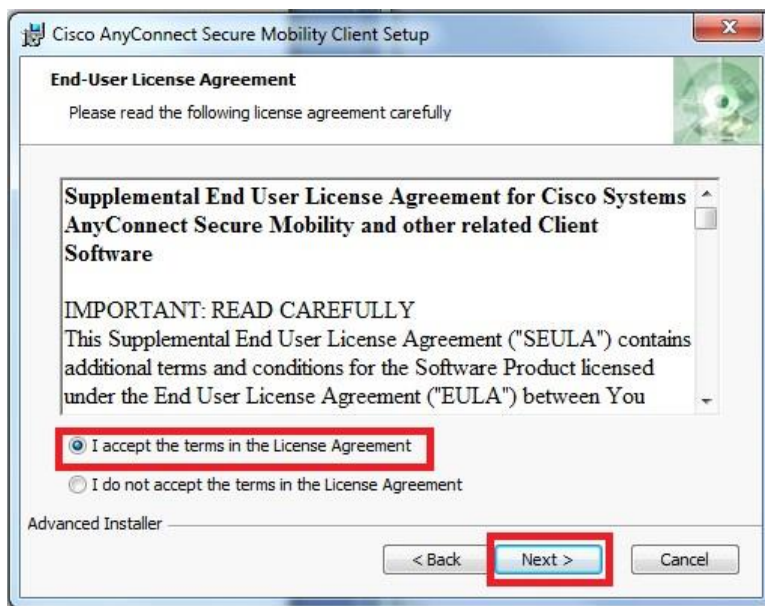

1. Go to the directory you downloaded the file to and run anyconnect.msi

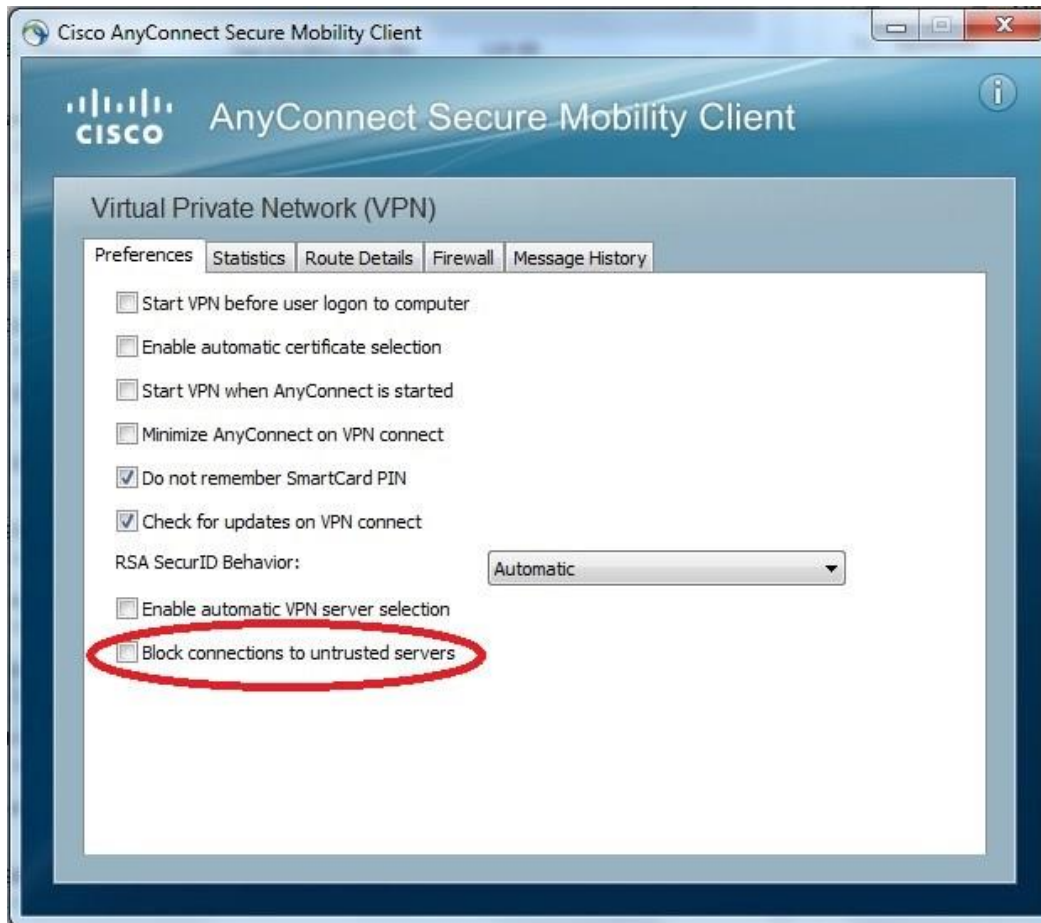

2. When the program opens click "Next"

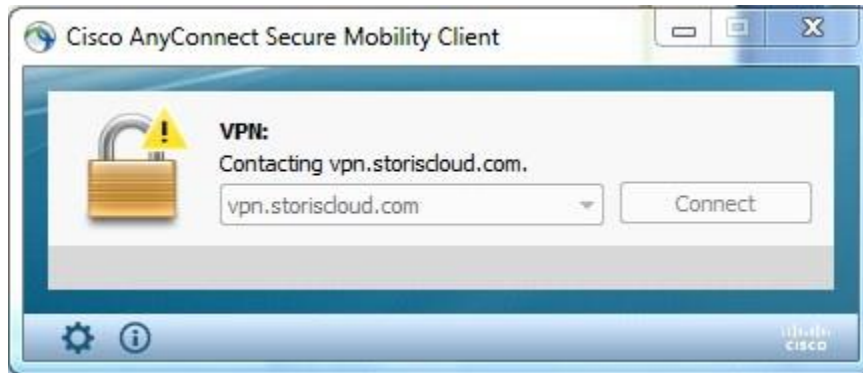

3. Agree to the terms and click "Next" and then click on "Install"

4. Once installed, you will need to go click the cog in the lower left and go to "Preferences" and uncheck "Block connections to untrusted servers."

5. Connect to the VPN using the following hostname - **vpn.storiscloud.com**

6. The username and password for the VPN is the same one we are using with our existing SAAS clients.

Username = **StorisVPN** Password
= **VPNsaas!**

7. Hit the "OK" button to connect, go to the bottom right of the taskbar and lift click on the arrow. Hover the mouse cursor over the AnyConnect icon to check that the connection is successful.
